

# 1 Installation

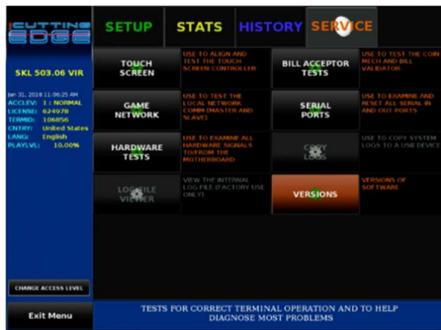

*ALWAYS DO A COLLECTION BEFORE UPDATING YOUR MACHINE!!*

PERFORM THESE STEPS TO CARRY DATA OVER TO YOUR UPDATED VERSION:

1. Make sure you have collected all desired financial data from the machine.
2. Do not power off the machine. Insert your update thumb drive and a keyboard into any free USB ports in preparation for the normal installation procedure.

*NOTE If you have a USB with a BLUE connector use that slot for the update drive.*

3. Enter the Operator Menu, navigate to the SERVICE menu, and touch the VERSIONS button.
4. In the VERSIONS screen, press the BACK UP DATASTORE button. The back-up expires in 10 minutes.
5. When asked to restart, touch YES unless you need to abort the process and start over.

11. Repeat the above steps to update the meters on the other machines once the software update has been done.

If you are unsure if you need to reset the meters in Routeboost after the upgrade process you can double check by doing the following steps.

1. Go to the operator menu on the skill game
2. Click change access level and enter your code.
3. Go to Stats and Terminal Stats.
4. Look at the archive column. If the numbers are showing 0 then follow the instructions above.

For any questions regarding the Routeboost software please call 570-323-6859 for technical support

## **2 Back out, Recovery and Considerations**

During the update process there is a “Point of no Return” where recovery is not available. A complete “Virgin” install will be needed if there is an error. Please review the installation document prior to attempting.

*Note: It is HIGHLY suggested you record the “Remaining Fill” amount in case of a fatal error, Fill replacement may not be available if this is not noted. This can be done by printing off an “Archive” report from level 2.*

*Note: It is HIGHLY suggested a collection is preformed via the RouteBoost app prior to the upgrade, this will update the information and will be available if needed.*

Should the Database restore fail you MUST:

- “Zero” the meters in RouteBoost – failure to do this will result in an imbalance of collection data.
- Confirm and re-enter the TRT IP address if applicable

- END OF DOCUMENT -
